

JEA, workshop cabinets and technical furniture are **designed and manufactured in Italy** for the automotive workshops of tomorrow.

Manufactured in **module size**, this allows a design for a technical solution to fit the needs of both, new-build workshops or indeed the constraints of an existing workshop.

For the larger workshops of franchised dealer groups, JEA's central service module will house the **everyday necessities** that Technicians are required to use, from bulk stored oil of multiple grades, coolant, water and compressed air. Everything that is generally fastened to walls or a steel stand such as retractable reels, is now neatly stowed in JEA's central service module.

A successful workplace is one where employees feel valued and where their workspace is **designed to work** and help them deliver the service that customers expect. JEA's range of proven automotive workshop cabinetry achieves this and often exceeds expectations.
