

THE ONE-STOP-SHOP FOR **GARAGE EQUIPMENT**

***Helping you keep  
your customers  
on the road***

*Gott Technical Services is a supplier, installer and maintainer of garage workshop equipment based in the North East of England.*

With our range of products and services, we help to keep buses, ambulances, police cars, fire and rescue vehicles, refuse vehicles, delivery vans, supermarket lorries, and privately owned cars on the road. And we have been doing this for 37 years!

If you are a manager of a fleet or retail vehicle workshop, we can help you keep your customers on the road by ensuring that your workshop is always functioning at its optimum level.

Garage Equipment is something that not a lot of people know much about, but fortunately we do, and we know its importance in enabling the road transport industry, local authorities, emergency services, military forces and retail garage trades to provide essential services to the public. Because of this, we will continue to invest in supporting this essential industry with reliable equipment and prompt aftersales services. As a family business, it matters to us to get this right.

Please call us to see how we can help you deliver a first class service from your workshop.

A handwritten signature in black ink that reads 'Ian Gott'.

Ian Gott  
Managing Director

*PS. We also help keep trains on the tracks, helicopters in the air, military vehicles in action, and golf carts on the greens!*

# ***A company you can trust.***

*Whether you are looking to invest in new equipment, develop a new workshop, maximize the efficiency of your existing workshop, or require some repair, maintenance or calibration services, we would be delighted to help.*

Whatever your enquiry, we will always take a consultative approach. We do not believe in just selling you what we have available or handing over a product brochure and asking you to just 'pick one' from the list. We talk to you to find out what problems you are trying to solve or what aspirations you have for your business, and by listening to your requirements we will select the best solution for you.

As we have been trading for such a long time, we have a wealth of experience in the garage equipment supply trade, and have scoured the market to find the best range of products to offer our clients. When selecting products to add to our portfolio, we consider the following attributes:

- **Build Quality**
- **Reliability**
- **Generous Warranty**
- **Value for Money Pricing**
- **Innovation**
- **Ease of Use**
- **Availability of Spare Parts**
- **The Ability For Us To Provide The After Sales Support**

This means that when you buy products, from us you can buy with confidence.

# ***Our product portfolio.***

We aim to be a 'One-Stop-Shop' for the supply of garage workshop equipment, systems and tooling, so we have a vast range of products available. Our products include, but are not limited to:

- **Vehicle Lifts**
- **MOT Test Equipment**
- **Inspection Pit Equipment**
- **Wheel Servicing Equipment**
- **Air Compressors and Compressed Air Systems**
- **Bulk Oil Storage Tanks and Oil Distribution Systems**
- **Anti-Freeze Dispensing Systems**
- **Cleaning Equipment Including Pressure Washers, Vacuum Cleaners and Floor Scrubbers**
- **Fume and Dust Extraction Systems**
- **Workshop Furniture, Cabinetry and Tool Storage**
- **Manual Handling Equipment**
- **General Workshop Tools and Equipment**

*If there is anything you need for your workshop, please just give us a call, and if we do not already have it in our range we may be able to source it for you.*

# Our Suppliers

We have established long-standing relationships with our suppliers of quality garage equipment and as a result enjoy the benefits of playing an active part in helping to develop new and innovative products that our markets need.

One of our main longstanding suppliers is Rotary Lifts who are one of the largest vehicle lift manufacturers in the world. Their range includes hydraulic two post, four post, scissor and in-ground lifts along with commercial vehicle heavy duty pit inspection and manual handling equipment.

Our association with Trade Garage Equipment provides us with the unique Technique brand of equipment which includes MOT bay, wheel servicing, and fume extraction equipment.

Also, as a Trade distributor we are one of the few importers of high quality, stylish workshop cabinets, toolboxes and fitted workstations from Italian manufacturer DEA. These systems can significantly improve efficiency, productivity and appearance of garage workshops.

In addition to the Technique range of tyre equipment we also offer the market leading Hofmann Megaplan range.

Our jacking beams and commercial vehicle pit jacks come from the Majorlift range of products.

We are a long-standing Karcher distributor and service agent. We offer their full range of products including cold pressure washers, high pressure steam cleaners, vacuum cleaners and floor care machines including scrubbers and polishers.

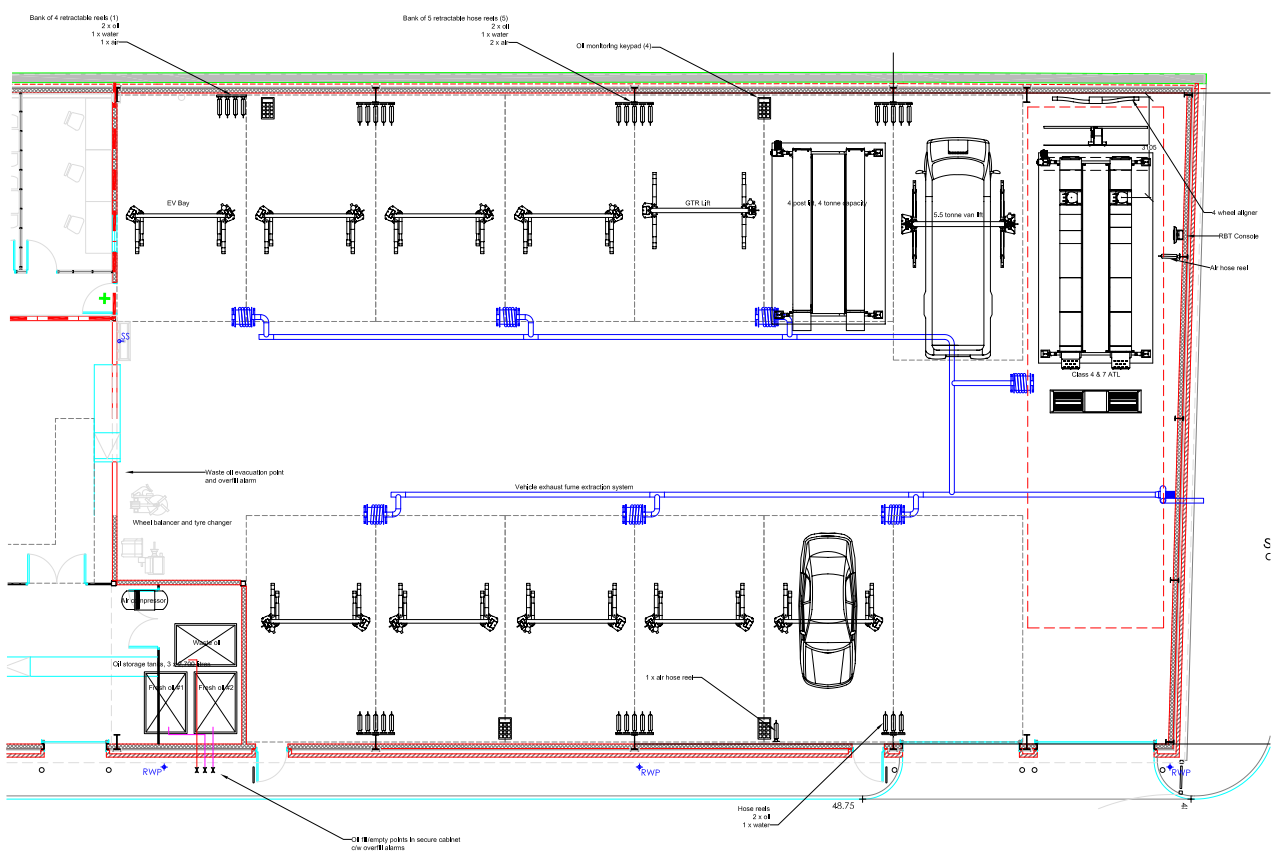

**In addition to this we represent a large range of manufacturers of air compressors, lubrication equipment and general workshop equipment.**

# Workshop Planning

*We have our own workshop planning and CAD design department which can be used if you are planning to build a new workshop or re-organise an existing one.*

We will visit you to discuss your requirements and can then provide advice on suitable layouts taking into consideration health and safety legislation and DVSA or vehicle manufacturer requirements. You can even visit us and view your workshop being designed 'live' in front of your eyes.

We can then supply and install all necessary equipment and also compressed air and oil distribution pipework, and fume extraction systems.

A project manager will be on hand to liase with your architect, builder, and M&E contractor.

Our engineers carry CSCS cards for working on construction sites.

# ***Want to modernise your workshop?***

Part of our service is to help our customers achieve improved efficiency and productivity in their workspaces. To assist with this we can design, supply and install stylish, high quality fitted workshop furniture from the DEA range to help you create an effective modern working environment for your team.

Whether your requirement is for a fully fitted cabinet system with integrated air, oil, water, electric and data services or a simple tool cab and bench setup, we have a solution for you.

If this is more than you need then we have a high quality range of simple workbenches of varying sizes and designs.

## ***MOT Bay design & Installation***

*A speciality of ours is the installation of new MOT bays and upgrading of existing test lanes.*

Many people these days want to upgrade their conventional bay to a One Person Test Lane (OPTL) or full Automated Test Lane (ATL).

We can visit you to discuss your requirements and measure your property to determine suitability for an MOT facility. Then we will draw up your proposed bay using our CAD facility to show you how your bay might look.

When you order your new MOT equipment from us we will provide full layout drawings for submission to DVSA, along with civil works drawings for your builder. Alternatively we can handle the building and electrical works for you if you wish.

We can help you with your application to DVSA and be present during your approval meetings. Our goal is to ensure that the installation of your new MOT bay runs smoothly.

# ***We Are Here When You Need Us.***

*When you choose Gott Technical Services for the supply of new workshop equipment you benefit from dealing with a company that can provide the complete package including aftersales care.*

We not only supply the equipment, we also install, maintain, calibrate and perform any warranty work ourselves with our own team of experienced service engineers.

Why not speak to us about our equipment service plans? Our goal is to provide you with one number to call for all your equipment service needs – whether it was purchased from us or not.

## ***MOT Calibrations***

We know how important the upkeep of a busy MOT bay or truck test lane is. It is for this reason that we treat the provision of calibration contracts for test bays with such priority.

When you choose one of our calibration contracts we create a unique database record on our computerised management system and then we keep track of when your next visit is due.

We contact you near to the due date and mutually agree a calibration appointment. Ensuring that we are accredited with CSA means that we can calibrate and repair certain emissions equipment, along with most popular brake testers and headlamp testers. We can also organise tooling calibrations to help you comply with ISO or dealer standards.

## ***Planned Maintenance***

*We specialise in providing maintenance services to suit a wide range of equipment.*

Reliance on workshop equipment to generate revenue, and increased health & safety legislation mean that more and more managers are realising the benefits of planned preventative maintenance packages.

Our service plans are designed to suit new and old equipment alike. Many people who have their equipment maintained often have up to six different companies servicing their equipment at a high cost and inconvenience.

At Gott Technical Services we train our engineers to carry out a prescribed list of extensive checks on equipment.

We believe in being thorough with this for health and safety reasons and to ensure, as far as possible, that future breakdowns on your equipment are kept to a minimum, thereby providing peace of mind.

When we service or calibrate your equipment we attach a label which clearly identifies the last date it was inspected, and when the next visit is due. For each vehicle lift serviced our engineers complete a 32 point inspection sheet and inspection report which meets the requirements of the LOLER regulations. If you have a service plan with us we will provide you with a branded document storage folder to keep all job sheets, reports and certificates in.

## ***Your one-stop-shop for Garage Equipment supply, installation & service.***

As with our MOT calibrations, we closely monitor when Planned Maintenance visits are due using our computerised helpdesk and contracts management system.

This system also includes a comprehensive equipment register which records all maintenance, calibration, warranty and breakdown history against each piece of equipment.

We always endeavour to offer the lowest prices possible but we will not compromise on service quality.

It is our desire to provide a quality, value for money service to the highest level that will ensure customer confidence.

*“Our goal is to cover all of your equipment with one convenient, cost-effective package.”*

## ***Statutory inspections***

**“Are thorough examinations or inspections the same as routine maintenance?”**

Some people believe because they have statutory inspections carried out on their equipment they do not require maintenance. This is not correct. The following text is an excerpt from HSE guide INDG4222 which clearly states that routine maintenance is essential for continued safe use of equipment.

“No. Routine maintenance typically involves checking and replacing worn or damaged parts, lubrication, replacing time-expired components, topping up fluid levels, and making routine adjustments. This is to ensure the equipment continues to operate as intended, and risks associated with wear or deterioration are avoided.

Thorough examination may indicate areas of poor maintenance, but is not intended to replace it. You should not wait for the results of a thorough examination before carrying out maintenance on your lifting equipment. Maintenance is a requirement under PUWER and applies to all work equipment including lifting equipment.”

# Vehicle Lift experts.

*Our engineers have many years' experience of installing, maintaining, and repairing vehicle lifts of all makes and sizes.*

Our range of vehicle lift services include:

- Installation
- Relocation
- Inspection
- Maintenance
- Rope replacement
- Levelling
- Load testing

Our engineers receive manufacturer, in-house and on-site training and are all Garage Equipment Association (GEA) Lift Engineer accredited. This accreditation means that as well as benefitting from many years practical experience our engineers have written proof that they are competent to carry out vehicle lift installation, inspection and maintenance work.

## Lift Operator Guidance

A key part of our relationship with our clients is ensuring they can make the most effective use of the equipment they have purchased. We always ensure that operator guidance is provided when we supply new equipment but we can also provide additional operator guidance for the safe use of vehicle lifts, delivered in the form of a toolbox talk. Many clients have appreciated the benefits of this as they can be sure their technicians or mechanics have a clear understanding of correct use and their responsibility for carrying out our operational checks of the equipment.

# ***BREAKDOWN RESPONSE***

Even if you do not have a service plan with us you can take advantage of our prompt breakdown repair service. Our team of experienced engineers is always on hand to respond to your calls and we have access to an extensive supply of spare parts for a large range of garage equipment, of all ages. We also offer technical help-desk support, where you can speak to an engineer who will help solve your problems over the phone.

Visit our website and use our 'Book an Engineer' form.

Or call **01670 516816** to speak to one of our team

# ***Pressure Systems Safety Regulations 2000***

*We can provide drawings and Written Schemes of Examination to enable you to comply with the Pressure Systems Safety Regulations 2000.*

These regulations apply to anybody that operates a pressure system including compressed air stored in an air receiver or ringmain. The schemes are written up, and inspections completed, by an independent, competent person.

Legally a pressure system must have a written scheme before it can be operated.

The written scheme will need to be reviewed from time to time. This is normally carried out prior to an examination of the system. This service is included in our schedule of work and therefore you need do nothing or pay additional fees as you might to other suppliers

## ***LEV Inspection & Certification***

As well as installing new fume and dust extraction systems we carry out LEV tests to help you comply with your COSHH obligations. We can also carry out any necessary repairs to your systems as required.

Our work incorporates P602 extraction design and installation and P601 LEV COSHH inspections.

## ***Join our community***

Here at Gott Technical Services we have a growing online community, see our Facebook, Twitter and YouTube pages for special offers and information. We also like to help promote our clients' successes when they invest in products or services with us so in partnering with us you could benefit from some free PR!

# ***What our customers say about us***

*“Everything was completed on time and the result was exactly to specification so we couldn’t have been happier with the finished product.”*

*“Gott were excellent in helping set up our new workshop, they treated it as though it was their own, giving ideas and options along the way, taking complete ownership, it made the whole project very easy.”*

*“Working with Gott Technical Services has been brilliant – the team’s experience is clear to see.”*

*“We need quality equipment and good service back up. We would not hesitate to recommend the services of Gott.”*

*“We’re thrilled with the support that Gott Technical Services has provided along the way to get our new venture off the ground. They have been incredibly helpful with their knowledge of the independent workshop and they have been able to tailor a solution to meet our needs as a business.”*

*“Their engineer worked none stop to fit four ramps in three days and stayed late last night to complete the ramps and the paper work. I was also impressed with their project manager’s professionalism and his keenness to complete the work, so we had no down time.”*

# Preventative Maintenance Checklist

**Can your existing garage equipment supplier and service provider promise all this?**

- 37 years servicing experience
